

The FCNI Education Committee invites you to

**“FrontoTemporal Dementia (FTD): The Most Common Cause
of Alzheimer’s Before Age 60”**

Presented by: Yvette Duloherly, EdS, MSN, APRN-BC

Date: Thursday, August 3, 2023

Time: 6pm to 7pm Central Time on Zoom

Frontotemporal dementia (FTD) has been in the news since Bruce Willis came public with his diagnosis. More importantly, FTD, which is also known as frontotemporal degeneration, is recognized as the most common cause of Alzheimer's under the age of 60. Scientists have discovered a genetic component, C9orf72, an autosomal dominant trait that demonstrates a familial link between FTD and amyotrophic lateral sclerosis (ALS). Sign up to learn more about these "life-limiting" disorders and the care we can provide.

Yvette Duloherly, EdS, MSN, APRN-BC is a Faith Community Nurse and has served as FCNI Secretary and Chair of the Technology Committee. She is a retired oncology nurse practitioner, with a history of diverse professional roles ranging from medical-surgical nursing to administration, intensive/critical care, trauma, obstetrics, home health, hospice, and teaching. She has been a Trauma Nurse Specialist, Certified Emergency Nurse, and Certified Oncology Nurse. She has a drive to help others and a passion to make a difference.

Learning Outcome:

1. Identify potential etiology, care, and treatment of frontotemporal dementia.

Registration: CNE 1.0 ANCC contact hours

\$20 for Members; \$40 for Nonmembers
